

DATABASE SYSTEMS ENGINEERING AND DISTRIBUTED BACKEND DEVELOPMENT (25CS1302E)

Y25 - 2026-2027 Trimester - 4

PROJECT ABSTRACT SUBMISSION FORM

Sec No-	13
Team No-	20
Project Title-	Hospital Management System

1. Abstract

A Hospital Management System (HMS) is a database-driven application designed to streamline and automate the management of hospital operations and patient-related information. Traditional hospital management often involves manual record keeping, which can lead to data duplication, delays in accessing information, difficulty in maintaining records, and errors in managing appointments and billing.

The proposed Hospital Management System provides a centralized platform for managing essential hospital activities such as patient registration, doctor and staff details, appointment scheduling, patient medical records, room allocation, prescriptions, billing, and discharge information. The system uses a structured database to store and organize information securely, allowing authorized users to efficiently add, update, retrieve, and manage records.

The system aims to improve operational efficiency by reducing paperwork and minimizing manual errors. It also enables faster access to patient and hospital information, improves coordination between different departments, and supports better data management. Role-based access can be implemented to ensure that users access only the information relevant to their responsibilities.

The proposed system demonstrates the application of database systems engineering and backend development concepts to solve a practical healthcare management problem. Overall, the Hospital Management System provides an organized, reliable, and scalable solution for managing hospital data and day-to-day administrative operations.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520080047	T. Harsha Vardhan	
2520080058	G.Anirudh	

3. Frameworks / Platforms / Software Used

- Frontend: HTML, CSS, JavaScript
- Backend: Python / Flask
- Database: MySQL
- Development Environment: Visual Studio Code

- Database Management: MySQL Workbench

Guide Name and Signature (remarks if any): _____
